

V.A.P.O.R. Brand Style Guide

Vehicle Analytics, Processing & Operations in Real-time

This document defines the visual identity of the V.A.P.O.R. platform. All developers and designers must follow these guidelines to ensure a consistent and professional appearance across all interfaces.

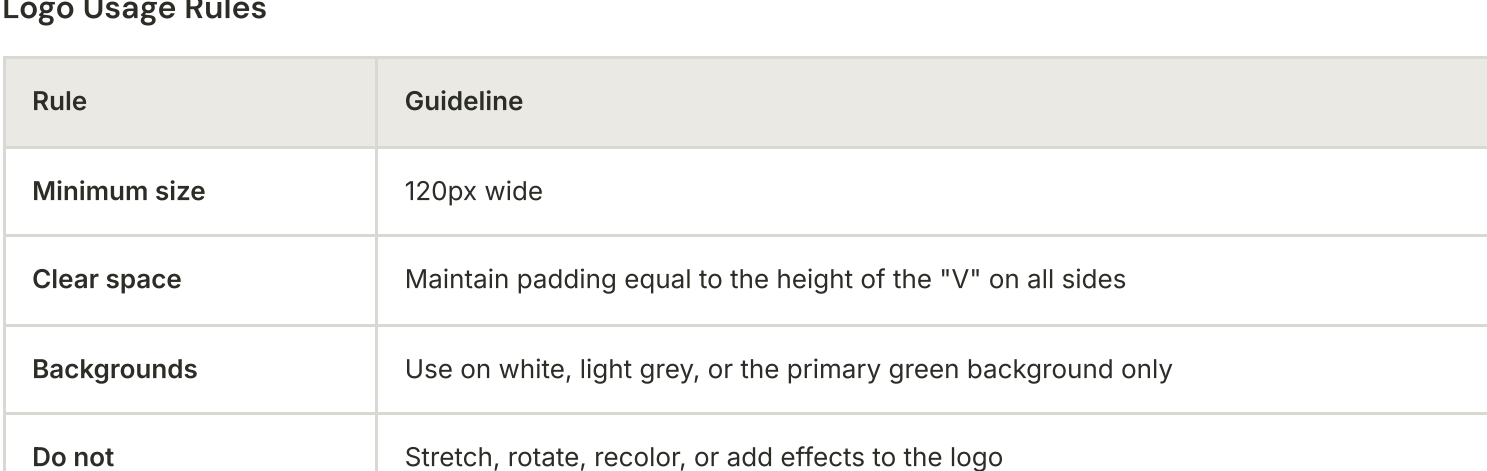

Table of Contents

- Logo and Iconography
- Color Palette
- Typography
- Design Principles
- UI Component Styling
- Shadow and Elevation
- Motion and Animation
- Responsive Breakpoints
- Accessibility

Logo and Iconography

Primary Logo

The V.A.P.O.R. logo consists of the wordmark "V.A.P.O.R." with the tagline "Vehicle Analytics, Processing & Operations in Real-time" beneath it. The O in the wordmark incorporates a smoke graphic element representing smoke (vapor) from the tire braking.

On White

On Light Grey

On Primary Green

Logo Usage Rules

Rule	Guideline
Minimum size	120px wide
Clear space	Maintain padding equal to the height of the "V" on all sides
Backgrounds	Use on white, light grey, or the primary green background only
Do not	Stretch, rotate, recolor, or add effects to the logo
Do not	Place on busy or low-contrast backgrounds

Iconography

The platform uses Lucide React as the primary icon library. Icons must:

- Be used at consistent sizes: 16px (inline), 20px (buttons), 24px (feature icons)
- Use `currentColor` for stroke so they inherit the surrounding text color
- Maintain a `strokeWidth` of 2 across all usage
- Never be filled unless the Lucide icon is explicitly a filled variant

Color Palette

Primary Colors

Token	Name	HEX Sample	Usage
<code>fleet-green</code>	Primary Green	<code>#4D7C5F</code>	Buttons, links, sidebar, active states
<code>fleet-surface</code>	Surface White	<code>#FFFFFF</code>	Cards, modals, form panels

Background Colors

Token	Name	HEX Sample	Usage
<code>fleet-bg</code>	App Background	<code>#F4F3EF</code>	Main application background
<code>fleet-panel</code>	Panel Background	<code>#EAE9E3</code>	Secondary panels, muted sections

Text Colors

Token	Name	HEX Sample	Usage
<code>fleet-text</code>	Primary Text	<code>#2B2D26</code>	Headings and body text
<code>fleet-secondary</code>	Secondary Text	<code>#6B6B63</code>	Subtitles, placeholders, captions

Border Colors

Token	Name	HEX Sample	Usage
<code>fleet-border</code>	Border	<code>#D9D8D2</code>	Component borders, dividers, input borders

Semantic Colors

Token	Name	HEX Sample	Usage
<code>fleet-alert</code>	Alert / Error	<code>#C8392B</code>	Error messages, destructive actions
<code>fleet-warning</code>	Warning	<code>#E67E22</code>	Warning indicators, caution states
<code>fleet-idle</code>	Idle / Inactive	<code>#9E9E9E</code>	Offline vehicles, inactive elements

Color Swatches

Primary Green	<code>#4D7C5F</code>
App Background	<code>#F4F3EF</code>
Surface White	<code>#FFFFFF</code>
Panel	<code>#EAE9E3</code>
Primary Text	<code>#2B2D26</code>
Secondary Text	<code>#6B6B63</code>
Border	<code>#D9D8D2</code>
Alert	<code>#C8392B</code>
Warning	<code>#E67E22</code>
Idle	<code>#9E9E9E</code>

Typography

Font Families

Role	Font	Usage
Sans (Primary)	Inter	Body text, UI labels, form inputs, general content
Display	DM Sans	Headings, hero text, prominent titles
Mono	JetBrains Mono	Code snippets, telemetry values, technical data

```
/* Sans - body text and UI labels */
font-family: 'Inter', sans-serif;

/* Display - headings and titles */
font-family: 'DM Sans', sans-serif;

/* Mono - telemetry values and code */
font-family: 'JetBrains Mono', monospace;
```

Type Scale

Level	Size	Weight	Font	Live Preview Example
Display	32px / 2rem	700	DM Sans	Display Entry
Heading 1	24px / 1.5rem	700	DM Sans	Heading Level 1
Heading 2	20px / 1.25rem	600	DM Sans	Heading Level 2
Heading 3	16px / 1rem	600	DM Sans	Heading Level 3
Body	14px / 0.875rem	400	Inter	Standard application body layout text
Small	12px / 0.75rem	400	Inter	Captions, badge text elements
Micro	10px / 0.625rem	600	Inter	METRIC_NODE_TAG
Mono	13px / 0.8125rem	400	JetBrains Mono	87.42 km/h · #4D7C5F

Letter Spacing

- Headings: `-0.4px` to `-0.5px` (tight)
- Body: `0` (default)
- Uppercase labels: `+0.5px` to `+1px` (wide)

Line Height

- Headings: `1.2` to `1.3`
- Body text: `1.5`
- Small/micro: `1.4`

Border Radius

Token	Value	Live Visual Preview Target
<code>sm</code>	<code>calc(var(--radius) - 4px)</code> (8px)	System Badge
<code>md</code>	<code>calc(var(--radius) - 2px)</code> (10px)	Input Box
<code>lg</code>	<code>var(--radius) + 0.75rem</code> (12px)	Main Card Structure

Design Principles

Consistency

All UI elements must follow the defined color tokens, typography scale and spacing system. Components built by different team members must be visually indistinguishable.

Simplicity

The interface should surface only what the fleet manager needs at any given moment. Avoid visual clutter, excessive decoration and unnecessary UI elements. Data should speak for itself.

Responsiveness

All screens must be functional across desktop, tablet and mobile viewports. Use Tailwind responsive prefixes (`sm`, `lg`) consistently throughout the codebase.

Real-time First

The platform processes live vehicle data. The UI must communicate data freshness clearly at all times. Loading states, live indicators and timestamps are required on all data-driven components.

Accessibility

The interface must be usable by individuals with diverse abilities. Color alone must never be the only way to communicate status or meaning.

UI Component Styling

Buttons

Variant	Background	Text	Live Interactive Preview
Primary	<code>#4D7C5F</code>	<code>#FFFFFF</code>	Primary Action
Secondary	<code>#EAE9E3</code>	<code>#2B2D26</code>	Secondary Action
Destructive	<code>#C8392B</code>	<code>#FFFFFF</code>	Delete System Node
Ghost	Transparent	<code>#2B2D26</code>	Ghost Link
Disabled	<code>#9E9E9E</code>	<code>#FFFFFF</code>	Locked System

Button specifications: Border radius `0.75rem`, Padding `10px 16px`, Font Inter, `13px`, weight `680`, Letter spacing `0.5px`.

Form Inputs

Default State

Cards

Live Rendered Container Card
Background <code>#FFFFFF</code> , Border <code>1px solid #D9D8D2</code> , Border Radius <code>0.75rem</code> , Shadow Low elevation allocation.

Navigation / Sidebar

Modals

Status Indicators

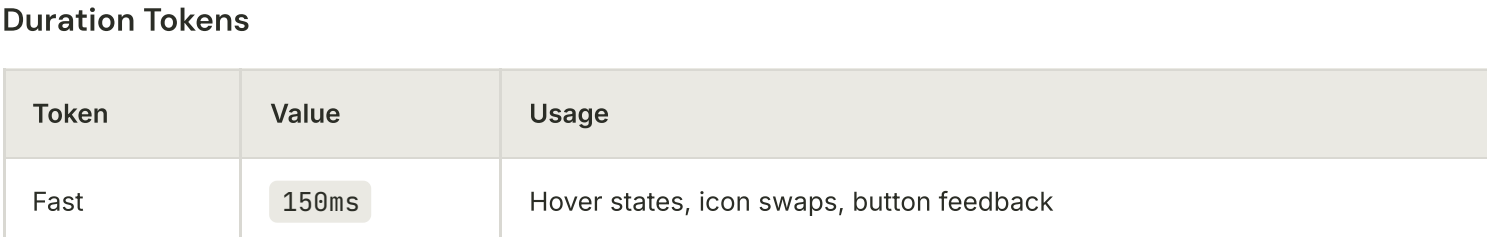

Status	Token	HEX	Visual Live Render Preview
Active / Online	<code>fleet-green</code>	<code>#4D7C5F</code>	● Active Systems Running
Idle	<code>fleet-idle</code>	<code>#9E9E9E</code>	● Device Cluster Idle
Warning	<code>fleet-warning</code>	<code>#E67E22</code>	● Boundary Breach Threat
Offline / Error	<code>fleet-alert</code>	<code>#C8392B</code>	● Receiver Pipeline Failure

Spacing System

Size	Value	Usage
xs	<code>4px</code>	Icon gaps, tight padding
sm	<code>8px</code>	Component internal spacing
md	<code>16px</code>	Card padding, section gaps
lg	<code>24px</code>	Page section spacing
xl	<code>32px</code>	Major layout gaps
2xl	<code>48px</code>	Page-level spacing

Shadow and Elevation

Shadows communicate depth and hierarchy. Keep them subtle as the interface is data-dense and shadows should never overpower content.

Level	CSS Value	Usage
None	<code>none</code>	Flat surfaces, dividers, inline elements
Low	<code>0 1px 3px rgba(0,0,0,0.06), 0 1px 2px rgba(0,0,0,0.04)</code>	Default cards, stat tiles
Medium	<code>0 4px 6px rgba(0,0,0,0.08), 0 2px 4px rgba(0,0,0,0.05)</code>	Modals, dropdowns, popovers
High	<code>0 10px 15px rgba(0,0,0,0.10), 0 4px 6px rgba(0,0,0,0.06)</code>	Floating overlays, toasts

Rules:

- Never stack multiple shadows on the same element
- Cards always use Low elevation
- Modals always use Medium elevation
- Never use shadows on buttons - use background color changes for hover states instead

Motion and Animation

All transitions must feel deliberate and consistent. Fast enough not to feel sluggish, slow enough not to feel jarring.

Duration Tokens

Token	Value	Usage
Fast	<code>150ms</code>	Hover states, icon swaps, button feedback
Normal	<code>250ms</code>	Panel opens, tab switches, dropdown reveals
Slow	<code>400ms</code>	Page-level transitions, modal enter/exit

Easing

All transitions use `ease-in-out` for consistency:

```
transition-timing-function: cubic-bezier(0.4, 0, 0.2, 1);
```

Motion Rules

- Hover feedback always uses the Fast token (`150ms`)
- Never animate layout-affecting properties like `width`, `height` or `padding` - animate `opacity` and `transform` only
- Loading spinners use a continuous `360deg` rotation at `600ms` linear

Active Loading Engine Stream Spinning Frame...

```
@media (prefers-reduced-motion: reduce) {
  *, *:before, *:after {
    transition-duration: 0.01ms !important;
    animation-duration: 0.01ms !important;
  }
}
```

Responsive Breakpoints

V.A.P.O.R. is a desktop-primary application - fleet managers typically work on large screens. All views must still render properly at smaller widths.

Breakpoint	Width	Layout Behaviour
Mobile	<code>< 640px</code>	Single column. Sidebar collapses to bottom nav. Cards stack full-width.
Tablet	<code>640px - 1024px</code>	2-column card grid. Sidebar collapses to icon-only rail. Map fills width.
Desktop	<code>> 1024px</code>	Full layout with expanded sidebar. Default design target.
Wide	<code>> 1280px</code>	Max-width <code>1280px</code> centered. Extra whitespace on sides.

Use Tailwind CSS breakpoint prefixes consistently: `sm`: (640px), `md`: (768px), `lg`: (1024px), `xl`: (1280px).

Rules:

- Design mobile-last - desktop is the primary target but mobile must not break
- The map component must always fill its container width at all breakpoints
- Tables must scroll horizontally on mobile rather than truncating data
- Minimum touch target size on mobile: `44x44px`

Accessibility

Color Contrast

All text must meet WCAG 2.1 AA contrast requirements:

Combination	Interactive Visual Render	Ratio	Standard
<code>#FFFFFF</code> on <code>#4D7C5F</code>	Text Trace	4.8:1	Passes AA
<code>#2B2D26</code> on <code>#F4F3EF</code>	Text Trace	12.4:1	Passes AAA
<code>#2B2D26</code> on <code>#FFFFFF</code>	Text Trace	15:1	Passes AAA
<code>#FFFFFF</code> on <code>#C8392B</code>	Text Trace	4.7:1	Passes AA
<code>#6B6B63</code> on <code>#FFFFFF</code>	Text Trace	5.7:1	Passes AA

Keyboard Navigation

- All interactive elements must be reachable via `Tab`
- Focus states must be clearly visible using the `fleet-green` ring color: Interactive Focus Target Demo
- Modal dialogs must trap focus while open and return focus on close
- Dropdowns must be dismissible via `Escape`

Screen Reader Compatibility

- All images must have descriptive `alt` attributes
- Icon-only buttons must have `aria-label` attributes
- Form inputs must have associated `<label>` elements
- Loading states must use `aria-live` regions
- Status changes must be announced via `aria-live="polite"`

WCAG 2.1 AA Compliance Checklist

- Minimum text size: `12px`
- Color is never the only means of conveying information
- Interactive elements have a minimum touch target of `44x44px`
- Error messages are descriptive and suggest corrective action
- Form validation errors are associated with their input fields
